Excerpt: .to the secondary objec Fig. 118.--Diagram of prismatic telescope, used on transit shown in Fig. 117. tive at the end of the horizontal axis, the main telescope is pointed on a distant object, the interior prism is moved into place and the objective prism is rotated about its axis until the object is again cut by the horizontal wire. The line of sight through the secondary objective is now in the plane passing through the horizontal axis and the main telescope, and the vertical angles as read on the vertical circle are the true ones. The interchangeable feature allows the prism to be used on whichever objective is best suited for the work to be done. This simplifies the adjustment by limiting it to that necessary for one position, and permitting it to be made wherever an observation is to be taken. If the object...
