Excerpt from Applied Physiology: A Handbook for Students of Medicine With the increasing complexity of the medical curriculum, and the growing inclination to specialism amongst teachers, there is a tendency for the student to keep his knowledge in water-tight compartments. Physiology, for instance, is studied in the laboratory, and clinical medicine in the wards, and too often one finds that the student is incapable of applying his scientific knowledge to his clinical work. This is to be regretted, not only because it tends to lessen the interest of the practical study of disease, but because it leads to unsound and unscientific practice. For, beyond all question, the medicine of the future will be based more and more upon a sound knowledge of the normal working of the human body; or, in other words, upon Applied Physiology, and the best physician will be he who combines such knowledge in fullest measure with a wide practical experience at the bedside. Inability to apply the teachings of physiology leads also to this curious anomaly, that a man may have been taught, and presumably still believe, certain facts as true physiologically, and yet continue to act in his clinical work upon an apparently quite opposite creed.
