But so extremely intricate is the chemistry of the substances involved that in no single case has the exact nature of the metabolisms wrought by these organs been fully made out. Each is in its way a chemical laboratory indispensable to the right conduct of the organism, but the precise nature of its operations remains inscrutable. The vast importance of the operations of these intermediate organs is unquestioned. A consideration of the functions of that other set of organs known collectively as the nervous system is reserved for a later chapter. VI THEORIES OF ORGANIC EVOLUTION GOETHE AND THE METAMORPHOSIS OF PARTS WHEN Coleridge said of Humphry Davy that he might have been the greatest poet of his time had he not chosen rather to be the greatest chemist, it is possible that the enthusiasm of the friend outweighed the caution of the critic....
