

## Theory of Differential Equations Volume 4; (Vol. V-VI) Partial Differential Equations. 1906

Filesize: 2.89 MB

### ***Reviews***

*This publication will be worth purchasing. It really is written in simple terms instead of difficult to understand. It has been designed in an exceptionally simple way and is particularly only right after I finished reading this ebook in which basically modified me, alter the way I believe.*

## THEORY OF DIFFERENTIAL EQUATIONS VOLUME 4; (VOL. V-VI) PARTIAL DIFFERENTIAL EQUATIONS. 1906

To save **Theory of Differential Equations Volume 4; (Vol. V-VI) Partial Differential Equations. 1906** eBook, remember to refer to the button under and download the file or get access to other information which are in conjunction with **THEORY OF DIFFERENTIAL EQUATIONS VOLUME 4; (VOL. V-VI) PARTIAL DIFFERENTIAL EQUATIONS. 1906** book.

Rarebooksclub.com, United States, 2012. Paperback. Book Condition: New. 246 x 189 mm. Language: English . Brand New Book \*\*\*\*\* Print on Demand \*\*\*\*\*.This historic book may have numerous typos and missing text. Purchasers can download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1902 Excerpt: . the indicial function of  $N$  is the product of the indicial functions of  $T$  and  $8$ ; so that the indicial function of  $S$ , which gives all the regular integrals of  $N$ , is a factor of the indicial function of the original equation. The degree of the indicial function of  $S$  is equal to  $s$ , because  $S = 0$  is an equation of order  $s$  of Fuchsian type; the degree of the indicial function of  $iV$  is  $m-n$ , where  $n$  is the characteristic index of  $N = 0$ . Hence  $s + k = m-n$ , that is,  $8 = m-n-k$ ; so that (assuming for the moment that  $k$  may be either zero or greater than zero) an upper limit for the number of regular integrals which an equation can possess is given by  $m-n$ , where  $m$  is the order of the equation, and  $n$  is its characteristic index (supposed to be greater than zero). It is known that, when  $n = 0$ , the number of regular integrals is equal to  $m$ . Corollary I. An equation, whose indicial function is a constant, so that its indicial equation has no roots, has no regular integrals; for its characteristic index is equal to its order. But such equations are not the only equations devoid of regular integrals. Corollary II. When  $k$  is equal to zero, then  $s$  is equal to  $T-n$ , so that the number of regular integrals of the equation is actually equal to the degree of the indicial function. The...
